

FLAMETARD CORP.

June 1, 2002

This document describes the proper application **FLAMETARD** Class 'B' by the Consumer.

FLAMETARD Class 'B' is a topical flame retardant that can be applied by the Consumer. The Consumer will get varying degrees of protection dependant upon application procedure. As with all after-market products, test the product in an inconspicuous section of the material.

Compliance Statement:

FLAMETARD Class 'B' when properly applied to wood materials by a qualified applicator, meets or exceeds ASTM-E-84 Standards for Class B Flame Retardant.

Proper Application:

The most effective application of **FLAMETARD** Class 'B' is done by total immersion of the material in the product. After soaking for approximately 2 minutes or more (complete soaking of all portions of material), drip dry, air dry, or kiln dry. Pay special attention to stacking of wood because of product adhesion. Use stack strips to space materials.

The second most effective application **FLAMETARD** Class 'B' to apply the product to the wood material being treated using a spray applicator, roller or paint brush. The wood should be completely covered where protection is required. Over application of product will not harm the application, but will consume more product. Drip dry, air dry, or kiln dry. Pay special attention to stacking of wood because of product adhesion.

Wood material may be treated with less spray than above, but **WILL have substantially LESS flame resistance** than the above and may not meet the standards required.

Warrantee:

The Consumer is completely in control of the application of **FLAMETARD** Class 'B'. Southern Polymer Tech and it's distributors. will not be liable for any loss caused by combustion of materials treated by this product.

It is strongly recommended that a qualified person test the treated material to assure proper flame resistance. **FLAMETARD** Corp will attempt to direct the Consumer to a qualified applicator upon request.

FLAMETARD Corp is the exclusive distributor of **FLAMETARD** Fire Retardant products manufactured by Southern Polymer Tech.
